Appendix I Topography, Geology, Soils, and Hazardous Waste Sites

OEA analyzed how construction and operation of the proposed line (both the Southern and Northern Rail Alternatives) and the associated CMV Facility could affect topography, geology, soils, and hazardous waste sites. Topography is the natural and artificial surface features of a landscape. Geology is the structure on and below Earth's surface and the processes that have shaped it. Soils are the upper layer of earth in which plants grow. Hazardous waste sites involve the presence or concentration of liquids, solids, gases or sludges with properties that are potentially harmful to humans or the environment. This appendix describes the affected environment and potential environmental consequences on geology, soils, and hazardous waste sites that could result from the Southern and Northern Rail Alternatives, the associated CMV Facility, and the No-Action Alternative.

I.1 Approach

This section describes the approach OEA used to analyze effects on topography, geology, and soils in the study area. This section also describes the approach that OEA used to identify the sites of past hazardous materials releases. Construction of the proposed line has the potential to impact soil or groundwater contaminated by past deposits or releases (such as spills or leaks) of hazardous materials.

I.1.1 Topography, Geology, and Soils

OEA used the following sources to assess the affected environment and potential effects on topography, geology, and soils: Natural Resources Conservation Service (NRCS) Online Soil Survey for Maverick County, Texas; correspondence from NRCS; Geologic Database of Texas Viewer; Google Earth topographical data; and field observations conducted in April 2024.

This section also provides information on farmland that may require consideration under the Farmland Protection Policy Act (FPPA). 7 U.S.C. Part 658. FPPA is intended to minimize the impact that federal programs have on the unnecessary and irreversible conversion of farmland to nonagricultural uses. Farmland considered under FPAA includes prime farmland, unique farmland, and land of statewide or local importance. Prime farmland is land that has the best potential for producing essential crops and is available for such use. Unique farmland is land other than prime farmland that is used for high-value food and fiber crop production. Land of statewide or local importance is designated by state agencies and contributes to food production. The requirements and applicability of FPPA are further discussed in *Chapter 3, Section 3.12, Land Use,* of the Draft Environmental Impact Statement (EIS).

The topography, geology, and soils study area for the proposed line encompasses the area underlying the Southern and Northern Rail Alternatives. The study area for the associated CMV Facility is underlying the associated CMV Facility.

To evaluate potential effects on topography, geology, and soils, OEA used Geographic Information Systems (GIS) to overlay the two build alternatives and the associated CMV Facility onto soil and topographic maps.

I.1.2 Hazardous Waste Sites

Hazardous waste, as described by the U.S. Environmental Protection Agency (EPA), is waste with properties that make it dangerous or potentially harmful to human health or the environment. Hazardous wastes, which can be liquids, solids, gases, or sludges, are generally discarded commercial products or the byproducts of manufacturing processes (EPA 2024d). Hazardous materials are hazardous substances as defined by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and are not necessarily associated with chemical handling and industrial processes. 42 U.S.C. § 9601 *et seq.* For purposes of OEA's analysis, a hazardous materials site is a documented area that has been affected by a past release of hazardous materials into soil, groundwater, surface water, sediments, and/or air.

OEA identified sites where releases of hazardous materials are recorded to have occurred within 500 feet of the proposed line and the associated CMV Facility, including construction staging areas (hereafter referred to as the study area). OEA used a 500-foot buffer when seeking to identify hazardous materials release sites where contamination may have migrated into a project construction area. OEA considers it unlikely that this would happen for sites farther than 500 feet.

To identify documented past spills and releases of hazardous materials in the study area, OEA obtained environmental database reports from Environmental Data Resources, Inc. (EDR) (EDR 2024). The EDR reports include listings from several federal and state environmental databases, a subset of which are listed in ASTM Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Specifically, the following state and federal environmental databases were searched by EDR in preparing the reports: Federal National Priorities List (NPL), Superfund Enterprise Management System (SEMS), Resource Conservation Recovery Act (RCRA) corrective action (CORRACTS), RCRA generator, engineering/institutional control, Emergency Response Notification System (ERNS), state and tribal equivalent SEMS, IA ALLSITES, landfill or solid waste disposal sites, leaking storage tanks, registered storage tanks, voluntary cleanup programs, and brownfield databases. Descriptions of these different environmental databases are included in *Attachment A* to this appendix. A property identified in the EDR reports may be listed in multiple environmental databases. OEA evaluated only database listings related to spills or releases of petroleum and/or hazardous materials to assess for potential impacts that past releases may have had on soil and/or groundwater conditions within the study area.

In addition, OEA conducted a review of Federal Railroad Administration's (FRA) database of train collision reports and Pipeline and Hazardous Materials Safety Administration (PHMSA) data to identify incidents that took place between 1990 and 2024 in the study area that involved hazardous materials and hazardous waste. OEA considered incidents that involved a spill or release of hazardous materials as outlined in 49 C.F.R. § 171.16 and resulted in impacts to either soil or groundwater. OEA used mile marker information for the proposed line and the Union Pacific Railroad (UP) mainline to determine the locations of rail incidents in the study area. Based on OEA's review of the FRA database of train collision reports, no incidents were identified within the study area.

After locating hazardous materials release sites and rail incidents in the study area, OEA considered the potential impacts of rail construction activities on hazardous materials release sites. An impact would occur if:

- The construction activities would disturb properties where hazardous materials sites have not achieved regulatory closure (*i.e.*, have not been remediated) with the applicable state or federal agency; or
- The construction activities would disturb hazardous materials release sites where a land use restriction prohibits disturbing contamination that was left in place (e.g., contaminated soil covered with asphalt, clean soil, or another barrier).

I.2 Affected Environment

I.2.1 Topography, Geology, and Soils

I.2.1.1 Proposed Line

According to the Geologic Database of Texas Viewer, the study area for the proposed line overlays three rock units: Fluviatile Terrace Deposits (Qt), Alluvium (Qal), and the Olmos Formation (Kol). Qt and Qal are located west of U.S. 277 and are characterized by their composition of gravel, sand, clay, silt, and organic material. East of U.S. 277 is Kol, which is mostly composed of clay, sandstone, and coal. The Kol formation in this area has a principal coal seam about 6-foot-thick underground.

Under either build alternative, the proposed line would run from the Rio Grande River and along Seco Creek at a terrain elevation of approximately 690 feet, and end at the existing UP mainline at approximately 745 feet. West to east from the Rio Grande River along the proposed line, the terrain slopes steeply, with up to an approximately 48 percent slope, to a maximum height of approximately 743 feet before decreasing near U.S. 277. East of U.S. 277, the terrain is relatively flat, with an elevation of approximately 726 feet.

Seco Creek meanders roughly parallel to the route of the proposed line and flows east to west into the Rio Grande River. Between the river and U.S. 277, the bed of Seco Creek cuts into the terrain at an average elevation of approximately 705 feet, creating a deep ravine with steep slopes. East of U.S. 277, the bed of Seco Creek has an average elevation of approximately 717 feet.

Coal mining operations began in Eagle Pass, Maverick County, in the late 1880s. The development of other fuels such as natural gas and oil led to the overall decline of mining operations in the area, leading to the closure of the Olmo's Lamar Mine and the International Coal Mines, connected to the Eagle Pass Mines, in the late 1920s (Texas Historical Commission n.d.). The Dos Republicas surface coal mine began operating in 2015 and closed in 2020. Available historic information and field observations do not indicate the presence of historic coal mines in the vicinity of the proposed line.

There are seven soil units underlying the proposed line, as shown in **Figure I-1** and summarized in **Table I-1**. Table I-1 shows selected characteristics for each soil type, including slope, K-factor, hydric soil rating, and farmland. Slope represents the average incline of the land. The K-factor represents the erosion susceptibility of the soil; a higher value indicates a greater erosion risk. A hydric soil rating indicates soil that is periodically or permanently saturated with water, which can lead to potential infrastructure instability and drainage concerns; hydric soils are one of the indicators used to identify

wetlands. LgA and LgB soils, found along Seco Creek, are classified as prime farmland if the soils are irrigated. In the study area for the proposed line, due to the steep topography along Seco Creek, confirmed by field observations, these soils are not suitable for agriculture and are not irrigated.

I.2.1.2 Associated CMV Facility

The site of the proposed associated CMV Facility overlaps the Qal and Qt rock units. From the Rio Grande River, the terrain rises sharply with a maximum slope of approximately 44 percent, then becomes relatively flat within the associated CMV Facility's footprint. Between the facility and Seco Creek to the south, the terrain is steep, with up to an approximately 56 percent slope.

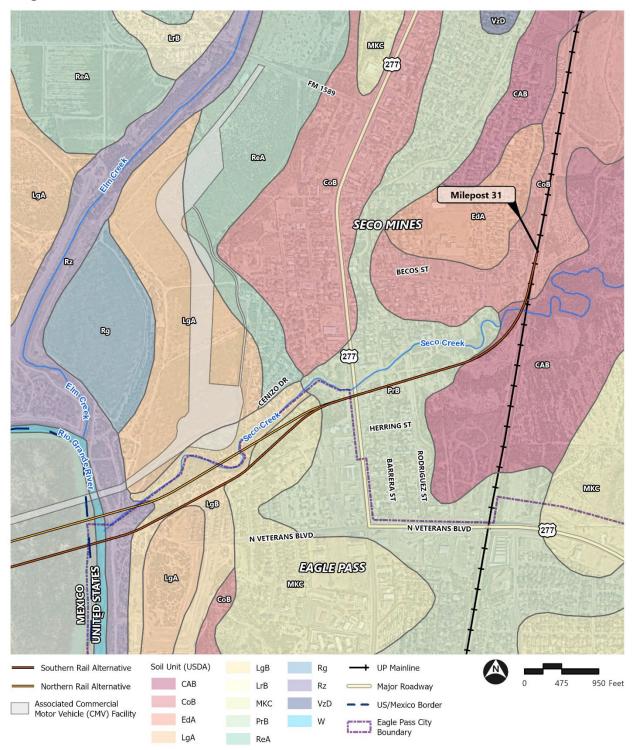

There are four soil units within the associated CMV Facility footprint, as shown in **Figure I-1** and summarized in **Table I-1**, including soils that qualify as prime farmland if irrigated. Field observations indicate that within the associated CMV Facility study area, such soils are currently irrigated and used for agriculture. They account for approximately 143 acres of the associated CMV Facility study area.

Table I-1. Characteristics of Soil Units in the Proposed Line and CMV Facility Study Areas

Map Unit Name Slope (percent) Farmla		Farmland	K-factor	Hydric Soil Rating
Both Proposed Line and CMV Facility	Study Areas			
Lagloria very fine sandy loam, 0 to 1 percent slopes (LgA)		Prime farmland if irrigated	1.00	No
Lagloria very fine sandy loam, 1 to 3 percent slopes (LgB)	1 to 3	Prime farmland if irrigated	1.00	No
Rio Grande and Zalla soils, frequently flooded (Rz)	Frequently flooded			Yes
Proposed Line Study Area Only				
Catarina clay, association, 0 to 5 percent slopes (CAB)	0 to 5	Not prime farmland	0.50	No
Copita sandy clay loam, 1 to 3 percent slopes (CoB)	1 to 3	Not prime farmland	0.13	No
Maverick association, undulating (MKC)	1 to 5	Not prime farmland	0.50	No
Pryor clay loam, 1 to 3 percent slopes (PrB)	1 to 3	Not prime farmland	0.88	No
Associated CMV Facility Study Area O	nly			
Reynosa silty clay loam, 0 to 1 percent slopes (ReA)	0 to 1	Prime farmland if irrigated	1.00	No

Source: NRCS 2024

Figure I-1. Soils Units

I.2.2 Hazardous Waste Sites

I.2.2.1 Recorded Sites

The EDR reports identified four properties in the study area with past spills or releases of petroleum and/or hazardous materials, as shown in **Figure I-2**. Information regarding each property is summarized below. See *Attachment A* for more details.

Commercial Property, 2550 Del Rio Boulevard

This property experienced a reported release of sewage from a hotel into a storm drain in July 2021. The quantity of sewage entering the storm drain is unknown, but there is no documentation indicating that soil or groundwater were impacted by the release.¹

Gutierrez Used Tires, 2600 Del Rio Boulevard

This property has been a used tire facility since November 1992. No violations or enforcement orders are recorded for the property.

W.C. Rabb, In and On West Bank of Drainage Ditch, Exact Limits Unknown

This property was an active landfill until 1992. The exact limits of the landfill are unknown; however, available documentation indicates that the landfill was located east of Rodriguez Street. Additionally, aerial imagery indicates that the property east of Rodriguez Street and north of North Veteran Boulevard contains a high volume of miscellaneous debris.

7-Eleven Store, 2427 Del Rio Boulevard²

Two 20,000-gallon underground storage tanks (USTs) that contain a combination of gasoline and diesel are reported to have been used at the property since May 2011. The property was noted for a violation associated with a failure to maintain copies of records pertaining to the UST system in May 2019.

I.2.2.2 Unregulated Landfill

In 2024, as part of the preparation of this Draft-EIS and pursuant to Section 106 of the National Historic Preservation Act, OEA conducted an archaeological survey of the Area of Potential Effects (APE) for the proposed line, which overlaps with the study area for past hazardous waste sites. During this survey, four excavated shovel tests near the western end of the proposed line found evidence of buried layers of modern refuse indicative of a modern landfill.

¹ While this spill was recorded as reported, OEA notes that current and historic aerial imagery do not show a hotel or motel at this address or adjacent to this address.

² OEA notes that, based on recent imagery, this property is now a Stripes service station and convenience store.

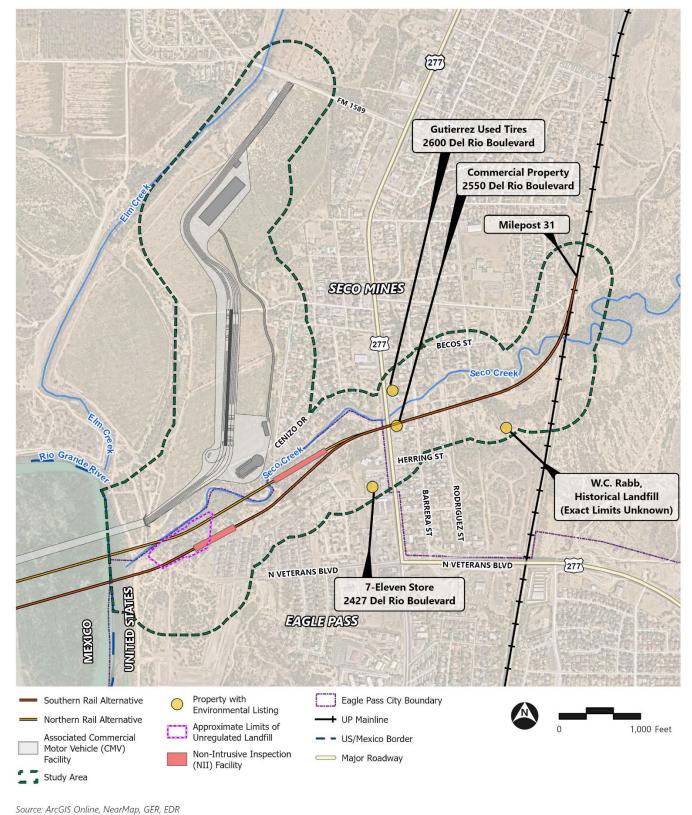

Figure I-2. Hazardous Waste Sites

Based on OEA's review of available documentation at the Texas Commission on Environmental Quality (TCEQ), this landfill does not appear to be regulated. Debris observed included domestic goods, architectural materials and tires up to a depth of 20 feet below ground surface. The observed refuse appears to extend towards the southern bank of Seco Creek, covering an area within the APE measuring approximately 300 feet by 810 feet. The approximate limits of this landfill are depicted in **Figure I-2.**

I.3 Environmental Consequences

I.3.1 Southern Rail Alternative

I.3.1.1 Topography, Geology, and Soils

The effects of the Southern Rail Alternative on topography and geology would be negligible. The Southern Rail Alternative would run on a new embankment that would allow it to remain nearly flat along its entire length, with slopes no greater than 0.15 percent. There would be no need to cut into the existing terrain to maintain the appropriate elevation for the Southern Rail Alternative to connect to the existing UP mainline. The embankment would introduce a new, artificial topographical feature in the landscape, approximately 18 to 19 feet high and up to approximately 130 feet in width, based on information provided by Green Eagle Railroad (GER). GER would design the new embankment to minimize potential effects on stormwater and floodwater flows (see *Chapter 3, Section 3.11, Water Resources*, of the Draft EIS for effects on floodplains). The design would also include the installation of culverts to maintain a hydrologic connection to Seco Creek, north of the proposed line.

During construction of the Southern Rail Alternative, topsoil layers would be cleared of vegetation, excavated, and compacted using heavy equipment to build the embankment and access road. GER would acquire materials for embankment construction through local sources. GER would use excavated soils to cover the embankments and reduce the angle of slopes as required to meet minimum standards for construction. The area covered by the embankment would be approximately 14.8 acres, based on information provided by GER. Approximately 0.47 acres would be used for bridge piers and abutments.

Altogether, soil compaction and the construction of the embankment, bridge piers, and abutments would reduce pervious surfaces along the proposed line by approximately 15.3 acres, leading to reduced groundwater recharge and increased stormwater runoff. Potential effects on stormwater runoff are addressed further in *Chapter 3, Section 3.11, Water Resources*, of the Draft EIS.

As shown in **Table I-1** above, soils along the Southern Rail Alternative have a high susceptibility to erode. Soil disturbance during excavation, grading, and cut-and-fill activities temporarily increases the potential for wind and water erosion, which can lead to water quality degradation through increased sedimentation. GER would avoid or minimize such effects through adherence to Texas Pollutant Discharge Elimination System (TPDES) regulations, including the preparation and implementation of a Stormwater Pollution Prevention Plan (SWPPP) that would specify appropriate erosion and sedimentation best management practices. These may include silt fences, earthen berms and dikes, or sediment traps to minimize sediment transport from the construction site into streams and the Rio Grande River. *Chapter 3, Section 3.11, Water Resources*, of the Draft EIS provides further information on TPDES regulations. Considering these regulatory requirements, OEA is not recommending any mitigation.

I.3.1.2 Hazardous Waste Sites

Construction of the Southern Rail Alternative would potentially disturb contaminated areas including the unregulated landfill near the western end of the proposed line and the W.C. Rabb Historic Landfill near its eastern end. The unregulated landfill is within the construction footprint. The W.C. Rabb Historic Landfill has no defined limits, presenting the potential for contamination from landfill materials within the construction footprint.

Soils removed during construction activities for the Southern Rail Alternative would ultimately require on-site or off-site reuse, recycling, or disposal. If contaminated soils are encountered, they would be disposed of at a landfill permitted to accept such waste, in accordance with applicable state and federal laws and regulations. Under RCRA, if GER disposed of contaminated soils at a landfill, regulations require that the soils are managed to prevent impacts to human health and the environment via proper containment within a licensed and permitted area. The removal of contamination from the study area would be a small beneficial impact.

The other sites listed in *Section I.2.2, Hazardous Waste Sites*, above, are unlikely to be affected by the construction of the Southern Rail Alternative because they are either far enough away from the construction footprint; do not have documented releases that warrant concern; or had releases that were responded to adequately. Therefore, OEA is not recommending any mitigation.

I.3.2 Northern Rail Alternative

I.3.2.1 Topography, Geology, and Soils

The effects of the Northern Rail Alternative on topography, geology, and soils would be similar to those of the Southern Rail Alternative described above. However, because of the different alignment of the Northern Rail Alternative west of U.S. 277 and the greater length of the New Rail Bridge, the total area occupied by the Northern Rail Alternative's embankment would be approximately 12.4 acres. Bridge piers and abutments would occupy approximately 0.7 acres. The total area of new impervious surface would be approximately 13.2 acres.

I.3.2.2 Hazardous Waste Sites

The impacts of the Northern Rail Alternative would be the same as those described above for the Southern Rail Alternative because the construction footprints of both alternatives are so similar. For the same reason as discussed for the Southern Rail Alternative, OEA is not recommending any mitigation.

I.3.3 Associated CMV Facility

I.3.3.1 Topography, Geology, and Soils

The effects on topography and geology from construction of the associated CMV Facility would be negligible. The facility would be located in an area that is generally flat and requires no deep excavations or cuts into the terrain.

Constructing the associated CMV Facility would require clearing vegetation, removing topsoil to a depth of 8 to 16 inches, filling and compacting backfill material to a thickness of 2 to 4 feet, and paving an area of approximately 60 acres. Deeper excavations would be needed to construct the foundation of

the supporting facilities (up to 4 feet); utility connection (up to 9 feet); and the piers and abutment of the New Road Bridge (up to 65 feet). Soil compaction and paving would reduce pervious surfaces by approximately 40 acres, leading to reduced groundwater recharge and increased stormwater runoff. Potential effects on stormwater runoff are discussed further in *Chapter 3, Section 3.11, Water Resources*, of the Draft-EIS. Puerto Verde Holdings (PVH) would avoid or minimize such effects through adherence to TPDES regulations, including the preparation and implementation of a SWPPP.

I.3.3.2 Hazardous Waste

OEA identified no past hazardous materials releases sites within 500 feet of the proposed associated CMV Facility. However, most of the area that the associated CMV Facility would occupy currently consists of an agricultural field, where OEA presumes pesticides and herbicides have been used. Pesticides are exempt from hazardous materials release reporting requirements provided they are applied consistently with labeling requirements and registered under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA). 7 U.S.C. § 136 et seq.

In accordance with applicable state and federal laws and regulations, if contaminated soils are encountered during construction, PVH would dispose of them at a landfill permitted to accept such waste. Soils disposed within a landfill would be managed to prevent future impacts to human health and the environment via proper containment within a licensed and permitted area. Therefore, OEA is not recommending any mitigation.

I.3.4 No-Action Alternative

Under the No-Action Alternative, the Surface Transportation Board (Board) would deny authority for GER to construct and operate the proposed line. The proposed line and the associated CMV Facility would not be constructed. There would be no new effects on geology, topography, or soils. Erosion and sediment transport due to natural processes such as wind and water would continue to occur at an unchanged rate. Hazardous waste sites would not be disturbed.

I.4 Conclusion

OEA has determined that construction of the Southern Rail Alternative, the Northern Rail Alternative, and the associated CMV Facility could result in temporary increases in erosion and sedimentation. However, GER and PVH would have to comply with TPDES permit requirements and the associated SWPPP, which would minimize these impacts. Therefore, OEA is not recommending mitigation for erosion and sedimentation impacts.

OEA has determined that construction of the Southern Rail Alternative, the Northern Rail Alternative, and the associated CMV Facility would have small beneficial impacts on hazardous waste sites because if any contaminated soils are encountered, they would be removed and disposed of at a licensed and permitted landfill in compliance with the RCRA. Therefore, OEA is not recommending mitigation.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate
less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GCC: Groundwater Contamination Cases

Texas Water Code, Section 26.406 requires the annual report to describe the current status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. The report is required to contain a description of each case of groundwater contamination documented during the previous calendar year. Also to be included, is a description of each case of contamination documented during previous periods for which voluntary clean up action was incomplete at the time the preceding report was issued. The report is also required to indicate the status of enforcement action for each listed case.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

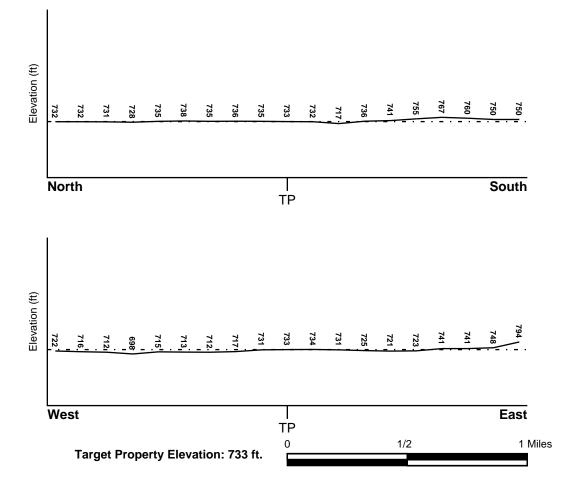

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

NOT AVAILABLE YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Lagloria

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information								
	Boundary			Classification		Saturated hydraulic		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)	
1	0 inches	44 inches	very fine sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9	
2	44 inches	79 inches	sr to silty clay loam to very fine sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9	

Soil Map ID: 2

Soil Component Name: Reynosa

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information								
	Boundary			Classification		Saturated hydraulic		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec		
1	0 inches	14 inches	silty clay loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9	
2	14 inches	44 inches	silty clay loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9	
3	44 inches	77 inches	sr to silty clay loam to very fine sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9	

Soil Map ID: 3

Soil Component Name: Rio Grande

Soil Surface Texture: very fine sandy loam

Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse Hydrologic Group:

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches Depth to Watertable Min: > 0 inches

Soil Layer Information									
	Boundary			Classification		Saturated hydraulic			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)		
1	0 inches	9 inches	very fine sandy	Not reported	Not reported	Max: 42	Max: 8.4

3	20 inches	25 inches	clay	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.4		
4	25 inches	72 inches	clay	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.4		

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 03/13/2024 has revealed that there is 1 ERNS site within approximately 0.125 miles of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

CLI: Closed and abandoned landfills (permitted as well as unauthorized) across the state of Texas. For current information regarding any of the sites included in this database, contact the appropriate Council of Governments agency.

A review of the CLI list, as provided by EDR, has revealed that there is 1 CLI site within approximately 0.125 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Texas Commission on Environmental Quality's Petroleum Storage Tank Database.

A review of the UST list, as provided by EDR, and dated 03/04/2024 has revealed that there is 1 UST site within approximately 0.125 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

CENTRAL REGISTRY: The Central Registry, a common record area of the TCEQ, maintains information about TCEQ customers and regulated activities, such as company names, addresses, and telephone numbers. This information is commonly referred to as "core data". The Central Registry provides the regulated community with a central access point within the agency to check core data and make changes when necessary.

A review of the CENTRAL REGISTRY list, as provided by EDR, and dated 05/30/2024 has revealed that there are 3 CENTRAL REGISTRY sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/09/2024 has revealed that there is 1 FINDS site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Registry ID: 110033877428				

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.125 miles of the target property.

Effect: ENVIRONMEN Frequency: PAST Nature: WASTE

Incident Comment: The TCEQ Region 16 hired Chemical Response & Remediation Contractors,

Inc. (CRRC) to clean up the used oil spill at Mr. Marical Beltran's property located at Eagle Pass, Texas. A notice of violation letter will be issued to Mr. Hector Lopez for all the used oil violations that were discovered at the time of the investigation. Mr. Lopez was the generator of the four 55-gallon drums of used oil. The used oil

spill was completely cleaned up by November 07, 2003.

Incident Description: On October 31, 2003, Ms. Elsa Hull, Tceq Pws Investigator Got A Call

From Mr. Mario Felan, Maverick County Inspector Regarding A Complaint He Received On October 30, 2003. According To Mr. Felan, He Was Alleging That Oil Was Leaking Into A Drainage Canal Leading To Elm Creek In Eagle Pass, Texas From Some Drums At A Nearby Property. He Couldn'T State How Much Oil Had Leaked, But It Seemed To Be A Big Mess

And Wanted The Tceq To Go Out To Look At The Site.

Nov ID: 618,357,222,019,150.00

Role Code: Not reported Date Notice Of Violation Issued: 05/31/2019

Description 1: Failure to maintain legible copies of all required records pertaining

to an UST system immediately available for inspection by Commission

personnel.

Description 2: On May 14, 2019 and May 22, 2019, Ms. Amundson provided facility

operating records to Ms. Aguirre via email. The operating records consisted of monthly release detection records, annual line and line leak detector test results and proof of financial assurance. These records appeared to be adequate. Release detection records were provided for the months or April 2018 through March 2019, and records indicated passing results. Annual line leak detector test results indicate that the product line and line leak detectors are functioning

properly. The financial assurance utilized by the facility

demonstrates financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental release arising from the operation for all applicable tanks at the facility. This will resolve the abovementioned

violation for failure to maintain legible copies of all required

records pertaining to an UST system.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

GCC: Groundwater Contamination Cases

Texas Water Code, Section 26.406 requires the annual report to describe the current status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. The report is required to contain a description of each case of groundwater contamination documented during the previous calendar year. Also to be included, is a description of each case of contamination documented during previous periods for which voluntary clean up action was incomplete at the time the preceding report was issued. The report is also required to indicate the status of enforcement action for each listed case.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

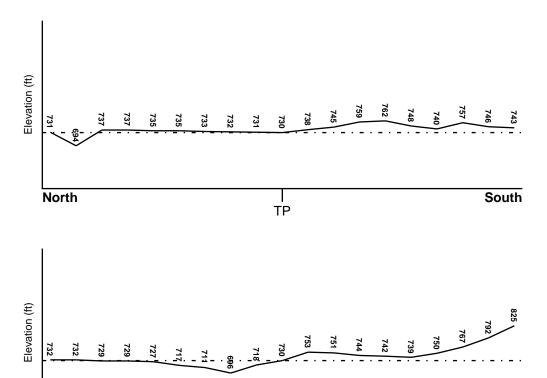

TARGET PROPERTY TOPOGRAPHY

West

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 730 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

East

1 Miles

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NWI Quad at Target Property Data Coverage

NOT AVAILABLE YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Lagloria

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information										
	Boundary			Classification		Saturated hydraulic					
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)				
1	0 inches	44 inches	very fine sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9				
2	44 inches	79 inches	sr to silty clay loam to very fine sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9				

Soil Map ID: 2

Soil Component Name: Lagloria

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information										
	Boundary			Classification		Saturated hydraulic

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
